Sectors:

[Ceramics Machinery & Equipment](#) ^[4]

Region:

Emilia Romagna

Overview:

LB Officine Meccaniche S.p.A. designs and builds plants and machinery for the ceramic industry, the milling of raw materials, the production of premixed powders, and the handling and storage of loose materials. Being a leader in the field of technology for porcelain tiles, the systems developed by LB for handling ceramic powders rely on innovative processes for weighing and batching, press feeding and press decorating, coloring, granulating and compacting. All these are essential tools for the production of porcelain tiles with the highest standards also from the aesthetical point of view.

The innovation brought to the field of milling and treatment of raw materials confirms LB as the point of reference in particular in dry milling, drying, screening and grading technological processes. LB machinery and plants are successfully used worldwide also for the treatment of ceramic bodies, clay, kaolin, feldspar, carbonate and other raw materials. LB designs and builds complete systems for the production of premixed powder used in construction. The experience and know-how related to storage, transport, weighing, batching and mixing of raw materials result in technologically innovative industrial plants for the production of glues and adhesives, mortars, plasters, cement-based binders and other products for the modern building industry.

LB is also the ideal partner for “bulk handling” activities (i.e. plants for storage, transport, management etc.) for

loose materials and powders in general. Today, thanks to the experience acquired over the years in several industrial sectors, LB can offer an excellent service in providing, even in the harbor field, particularly functional and innovative plant solutions.

Year established:

1973

Company applications:

Materials, equipment supplied:

- Process and product quality control
- Laboratory equipment
- Drying, Forming
- Shaping
- Casting
- Various equipment and accessories
- Press feeding carriages
- Press decoration system and equipment
- Complete turnkey plants
- Body and compound preparation
- Granulators
- Kneaders
- Roller mills, line roller mills
- Mixers
- Dry mills
- Continuous wet mills
- Storage silos
- Press feeding systems
- Classification and separation systems
- Weighing systems, raw material and spray dried product batching systems
- Transportation of raw materials and semi-finished products
- Feeder boxes
- Hoppers
- Screw conveyors
- Pneumatic and hydraulic conveyors

Product Categories:

- Heavy clay
- Ceramic tiles
